

Simplify assessments.

Supplier Assessment Questionnaire

Rx-360 developed the SAQ to solve common challenges across the pharmaceutical supply chain.

- ✓ *Meet Regulatory Expectations* – Manufacturers and regulators require adequate, consistent supplier information to evaluate risk.
- ✓ *Reduce Redundancy* – Instead of every company creating and managing its own forms, the SAQ provides one trusted, standardized approach.
- ✓ *Save Time and Resources* – Suppliers avoid the burden of repeatedly completing slightly different questionnaires for multiple customers.
- ✓ *Support Quality and Safety* – A shared framework ensures supply chain transparency and strengthens patient safety.
- ✓ *Enable Efficiency for All* – Both manufacturers and suppliers benefit from streamlined assessments, clear data, and fewer redundant requests.

The 6 Modules of the SAQ

Module 1 – Company Information

Module 2 – Site-Specific Information

Module 3 – Product Information

Module 4 – Service Supplier

Module 5 – Pre-Audit Questionnaire

Module 6 – Single Use Bioprocessing Products

Rx-360 unites the pharmaceutical industry in ensuring quality and security across the supply chain to protect patient safety. Rx-360 membership offers a host of benefits, including Joint Audit Program discounts. [Learn about membership.](#) ✨

For SAQ support: Email info@rx-360.org.

5 Steps for Using the SAQ

1. Access the SAQ online. ✨

- Complete the module(s) relevant to your company, sites, products, services, or as requested/required by the requestor (e.g., manufacturer). You may complete and maintain your SAQ response proactively, instead of or in addition to replying to a request.

2. Complete the questionnaire.

- Fill out the forms with accurate and current information. Modules are structured to cover Company, Site, Product, Services, Pre-Audit, and Single-Use Bioprocessing topics.
- You may need to fill out a given module multiple times in case of multiple sites or products.

3. Sign your submission.

- You will electronically sign your completed SAQ and attest that the information is accurate.

4. Review and send.

- You will receive two files via email for each module that you fill out.
- The PDF document will contain all of the information in a human readable form.
- The JSON file contains all of the same information in a computer readable format. This can be used to import answers to the form to make updates, share with colleagues or maintain multiple answer sets (e.g. one for each product).
- Once you review the PDF and are happy with it, please share both the PDF and JSON files with the requestor. Information is not shared directly with requestors and is never stored on Rx-360 servers.

5. Keep your information current.

- Review and update your SAQ response regularly to ensure your customers have the most accurate information.
